OCTOPUS CRAFT

Materials:

- a toilet paper roll
- markers or crayons
- scissors
- glue
- construction paper

Instructions:

Glue a large rectangular piece of paper on the tube to cover it. A full toilet paper roll might be a bit too tall for the octopus, so cut it down a bit. Cut out the octopus face and tentacles and bend about 1/4 inch of each tentacle and glue it to the inside of the tube.

Younger children can count the tentacles (8).

Slightly older children can count the suckers on each tentacle (4) and the tentacles (8) and then sort out that $4 \times 8 = 32$ either by multiplying or by counting all the suckers.
