

8 Planets

Did you know that scientists used to believe there were 9 planets in our solar system? Now they believe that there are only 8. Check out a library book or search on the internet for pictures of the planets in our solar system.

- What are they named?
- What are they made of?
- Which one is closest to the sun?
- Which number is earth from the sun?

Using a large piece of paper, draw your favorite of all the planets and write the name of the planet and three facts that you learned about that planet from your book or the internet.
