

Rectangle Recycle Sort

Take two large pieces of rectangle paper. Talk about how many sides a rectangle has and what it looks like. Designate one paper as the recycle paper and the other as the non recycle paper. Go through items that you would throw away and sort them on the papers based on if they are recyclable or not. Which paper has the most? Can you create a recycling can at your house and begin to recycle items that you would normally throw in the garbage? How does this help our earth?
