

Shape Hunt

Take your children on a walk around the neighborhood, grocery store or even your house. Have them point out different shapes to you as they walk (a door is a rectangle, ceiling may form a triangle, etc.) Using a clipboard with a piece of paper on it, tally how many shapes you see. How many squares did you find? How many circles? How many rectangles? What is the most common shape you found? What is the least common shape you found? Feel free to draw pictures or use a camera to take close up pictures of the shapes you find hiding in your community, and make a book or collage with your pictures.
